# **ZONE 1**

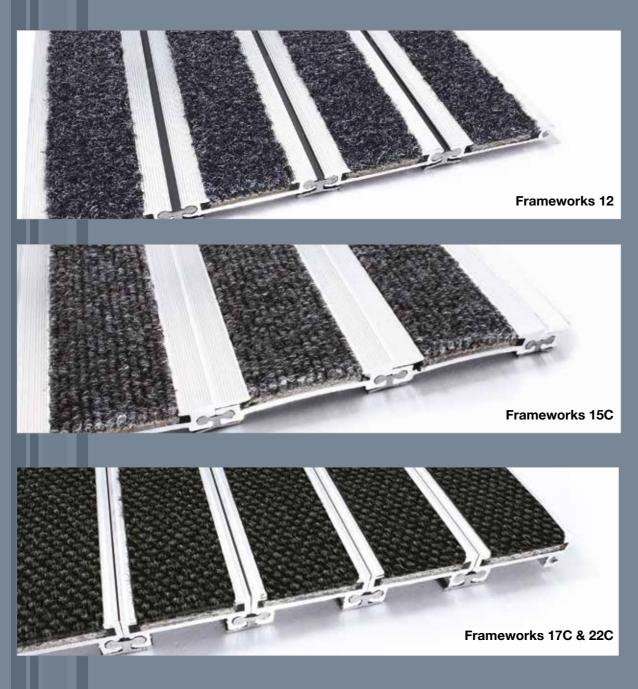

In Zones 1a and 1b the installation of exterior matting catches the first wave of heavy debris in a high traffic area, ensuring the removal of up to 40% of dirt and moisture from entering the building. An effective primary entrance mat will continue the removal of dirt and moisture working with the external matting containing any heavy debris.

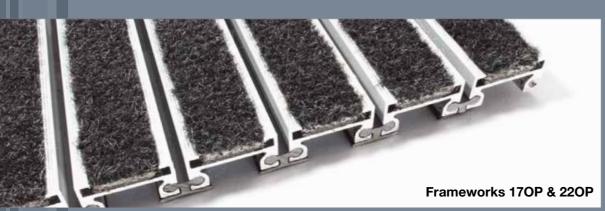

# **ZONE 2**

In these zones a high specification secondary barrier mat will continue the cleaning and scraping process, removing up to 70% of remaining dirt and moisture. At this stage dust is also driven into the matting rather than remaining airbourne.

# **ZONE 3**

n buildings with a very high volume of traffic, primary matting is often supplemented into secondary areas, cose lay matting and logo mats are used to reduce dust migration throughout main corridors and completely remove remaining dirt and moisture from shoes completing the drying process and protecting your building investment.

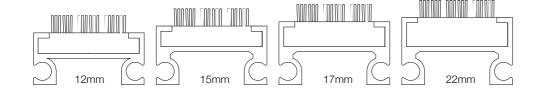

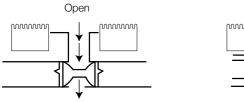

# How to choose your frameworks system\*:

Stage 1: Select your height

Stage 2: Pick your construction

Closed

Open - collect dirt and moisture inside the mat/matwell rather than on the surface. Rollable for cleaning. Closed - Dirt and moisture collected on the surface of the mat.

Stage 3: Pick your insert from 13 options

Mat. Works provides a survey and installation service on all Frameworks projects.

# FRAMEWORKS 12

# **Description:**

Low profile rollable aluminium grid matting system suitable for heavy traffic areas.

ldeal for recess matwells or areas where surface mountinis required.

The extruded aluminium profiles are assembled using PVC hinges which incorporates an integral damper strip. PVC hinges enable easier on site shaping.

Custom made to required sizes.

Ramping available for surface mounting.

Insert options available to allow for external use.

Anadised version available in black and bronze.

### Colours:

14 colour options available: see page 9.

### Accessories:

Frameworks accessories – see page 49 for further details. For simple rectangular mats, Frameworks can be made to exact requirements. For more complicated shapes, Mat.Works recommends one of our approved installers.

# FRAMEWORKS 15C

# **Description:**

Heavy gauge 15C entrance matting system.

Frameworks 15C incorporates an arch form heavy gauge aluminium chassis, capable of withstanding extreme traffic in the most demanding applications.

42mm wide wiper inserts provides optimum contact area for absorbency and soil collection.

Wide variety of wiper strips to suit almost any application with 16 different colourways.

Assembled using PVC hinges which incorporate an integral damper strip. PVC hinges enable easier on site shaping.

Custom made to required sizes.

Anadised version available in black and bronze.

### Colours:

14 colour options available: see page 9.

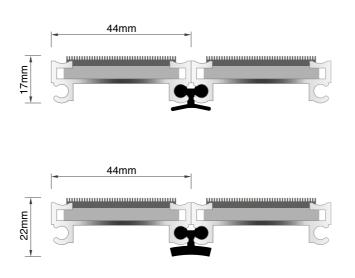

### Accessories:

Frameworks accessories – see page 49 for further details. For simple rectangular mats, Frameworks can be made to exact requirements. For more complicated shapes, Mat.Works recommends one of our approved installers.

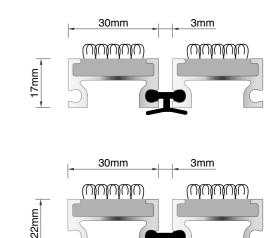

Mat. Works provides a survey and installation service on all Frameworks projects.

# FRAMEWORKS 17C & 22C

# **Description:**

Heavy duty primary entrance mat with exceptional performance.

Frameworks 17C and 22C closed construction ensures that all debris is captured by the mat surface to ensure a convenient cleaning operation.

Suitable for both footfall and trolley traffic

Wide variety of wiper strips to suit almost any application with 16 different colourways.

The extruded aluminium profiles are assembled using PVC hinges which incorporates an integral damper strip. PVC hinges enable easier on site shaping.

Anadised version available in black and bronze.

### Colours:

### Accessories:

Frameworks accessories – see page 49 for further details. For simple rectangular mats, Frameworks can be made to exact requirements. For more complicated shapes, Mat.Works recommends one of our approved installers.

# FRAMEWORKS 170P & 220P

# **Description:**

Frameworks 17OP and 22OP are heavy traffic entrance matting systems. Both systems incorporate a rollable, grid style, open surface construction. The open surface grid system allows dirt to fall into specially designed debris channels whilst allowing the textile inserts to wipe moisture from feet.

Wide variety of wiper strips to suit almost any application with 16 different colourways.

The extruded aluminium profiles are assembled using PVC hinges which incorporates an integral damper strip. PVC hinges enable easier on site shaping.

Custom made to required sizes.

A drainable 17DR is also available.

Anadised version available in black and bronze.

### Colours:

14 colour options available: see page 9

### Accessories:

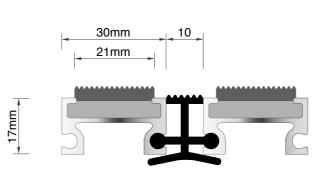

Frameworks accessories – see page 49 for further details. For simple rectangular mats, Frameworks can be made to exact requirements. For more complicated shapes, Mat.Works recommends one of our approved installers.

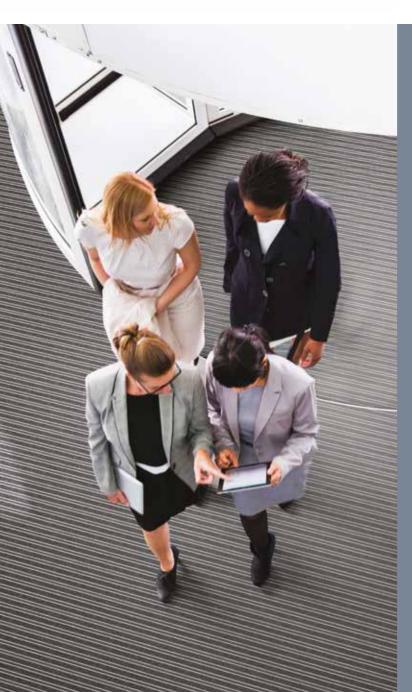

# **FRAMEWORKS 17CS**

# **Description:**

Frameworks 17CS is a closed construction primary entrance mat combining textile wiper inserts with alternate PVC scraper bars allowing for dirt and moisture to be taken off in one movement.

Wide variety of wiper strips to suit almost any application with 16 different colourways.

# **Colours:**

# **Accessories:**

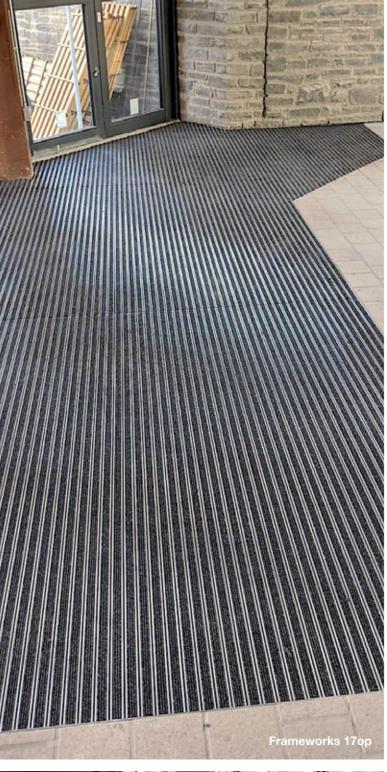

Frameworks accessories – see page 49 for further details. For simple rectangular mats, Frameworks can be made to exact requirements. For more complicated shapes, Mat.Works recommends one of our approved installers.

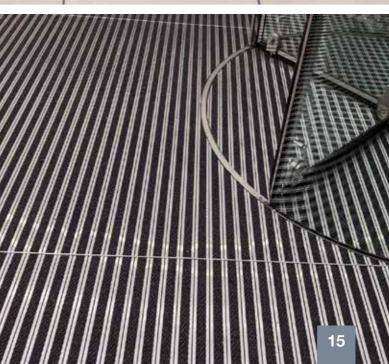

# **FRAMEWORKS CLIC-FIX**

# **Description:**

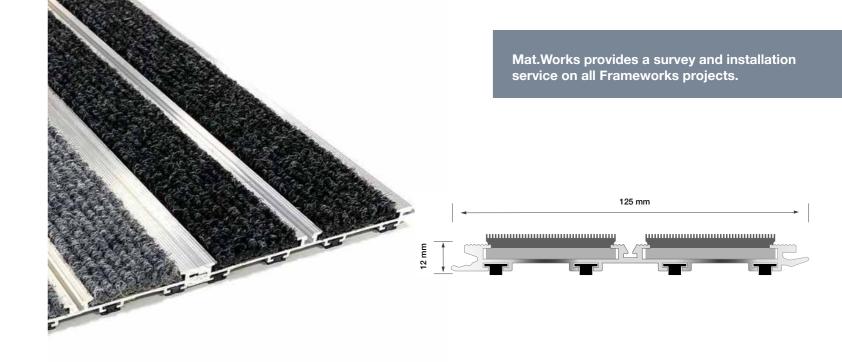

Frameworks Clic-Fix is an innovative new advancement from Mat. Works Entrance Solutions, enabling those from all flooring sectors to install the modular aluminium

profile to be quite simply 'clicked' together, ensuring the profiles hold and stay in place. This innovative method of fixing empowers a variety of installers to self-fit successfully.

Unlike other products, Frameworks Clic-Fix profiles do not simply 'sit' inside one another, instead they securely connect, preventing any looseness or sliding.

is suitable for both internal and external use. It should always be installed onto an even and level surface.

Each individual aluminium profile comes with two wide to prevent the ingress of dirt, debris, and moisture

# **Technical data:**

Module Size

Available in two standard sizes: 1800mm and 2100mm

Each aluminium profile has two carpet inserts (45mm), plus 3 PVC dampener strips beneath the base to prevent noise and movement

Can be laid uniform with dividing T-bars, or brickbond to avoid waste

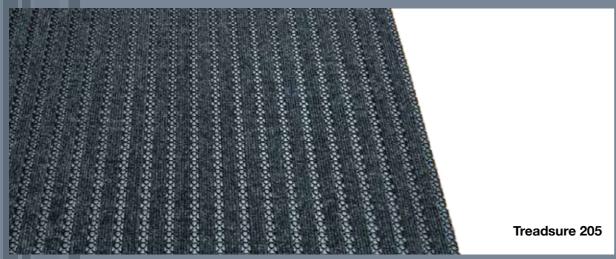

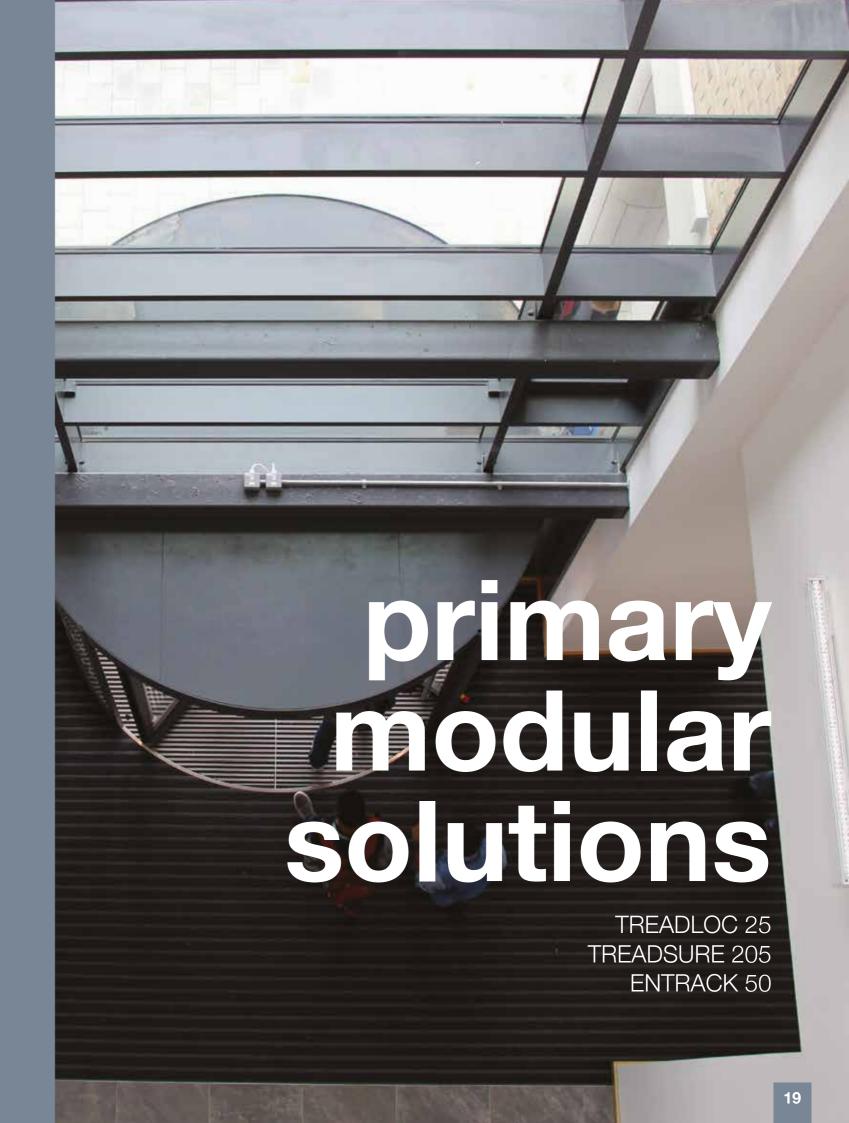

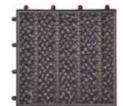

### Natural

Mat.Works provides a survey and installation service on all Treadloc 25 projects.

# **TREADLOC 25**

# **Description:**

Treadloc 25 by Mat.Works is a revolutionary modular matting solution. Manufactured from nitrile rubber, the 25cm x 25cm tile may be small but packs an almighty punch when it comes to performance.

Specifically designed to withstand heavy footfall, Treadloc 25 will not expand, contract, fade or become brittle, nor will it bend or buckle under pressure making it an ideal heavy contract solution for entrance areas in every sector. Unlike aluminium solutions, Treadloc 25 can withstand slight undulations in the sub-floor, which are sometimes unavoidable, without compromising the strength and performance of the product.

Treadloc 25 tiles are easily interchangeable and designed with interlocking male and female components for ease of installation. The versatile tiles can be quarter-turned during installation to create a checkerboard effect allowing for multi-directional entrances. There is also the added benefit of being able to purchase individual Treadloc 25 tiles, meaning any damaged tiles can be replaced with ease.

# Technical data:

Tile size mm Locking guides

Composition Performance

Wear classification

250 mm x 250 mm x 12
Easy Inter-locking system as standard. Removable male and female connectors.

Nitrile rubber composition
Nitrile rubber is resistant to oil, grease & fuel.

Heavy contract class 33

Treadloc 25 provides a flammability rating of Cfl-s2 (BS EN 14041:2004)

### **Perfect for Healthcare**

The inherent properties of the nitrile compound used in Treadloc25 have been proven to have anti-microbial properties which help to combat the spread of hospital acquired infections, including MRSA.

The product has been tested in accordance with ISO22196 which specifies a method of evaluating the antibacterial activity of antibacterial-treated plastics, and other non-porous surfaces of products.

These test results show a 99.29% reduction of MRSA bacterium on the TreadLoc25 tile.

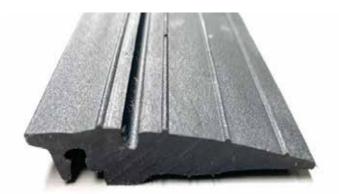

When examined under the Coefficient of Friction test (TRRL Pendulum test in accordance with BS 7976-2:200+A1:2013), Treadloc 25 has been proven to provide a low risk for slips in both dry and wet conditions.

# No matwell or recess? No problem! Treadloc 25 has an optional click-fit ramping system...

# TREADLOC 25 RAMPING SOLUTION

# **Description:**

Treadloc 25 can be surface-mounted, with the option of a heavy duty click-fit ramping system, making the product suitable for buildings without a matwell or recess.

The heavy-duty ramped edges allow wheeled and trolley access, as well as helping to prevent trip accidents. The edging system creates a 'surface matwell', where a mat is laid directly on top of the floor.

# **Key Features:**

Ramping system to enable Treadloc 25 to be surface-mounted

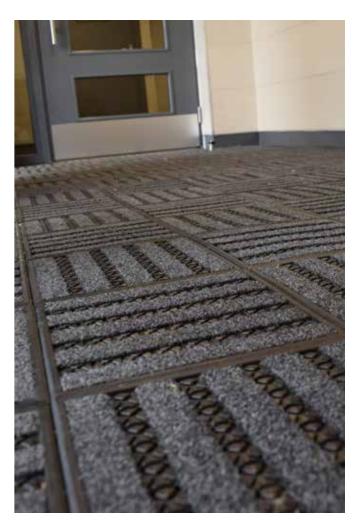

Made from durable rubbe

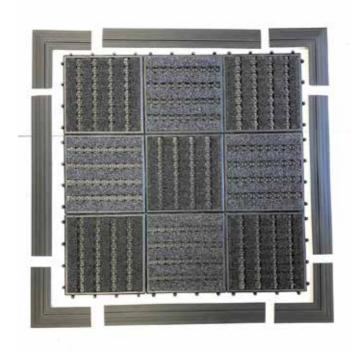

Pre-mitred corners for accuracy

Available in 2m length:

Incorporate a colour of your choice into the ramp debris channel, for a striking and stand-out finish (as shown in the image on the left).

# NOTE AND A SECOND OF THE PERSON OF THE PERSO

# **TREADSURE 205**

# **Description:**

designed not just for extremely heavy footfall but also with wheeled traffic entrances in supermarkets, retail, education, and healthcare in mind - providing an alternative to aluminium matting systems.

Manufactured from nitrile rubber to provide optimum performance Treadsure 205 has a host of key features that set the product apart from any other standard modular matting system.

One of these is its sheer durability, which is provided by the product size and weight, ensuring it is one of the heaviest modular matting solutions available on the market. This sturdiness of Treadsure 205 provides significant durability when installed. It will

will not move or slip in the matwell. It also makes installation easier, as there are no click or interlocking systems. If more than one system is needed, The modules can simply be butted up next to each other in the matwell and cut as required using a utility knife, significantly reducing installation times.

Will not buckle or bounce under pressure, making it suitable for wheel and trolley traffic.

Perfect for healthcare environments due to the compounds infections, including MRSA.

# க் DDA COIR

# **Description:**

Our Mat. Works DDA Coir is hard-wearing and satisfies all official commercial requirements, which is unique for a coir product. It complies with the rigorous European Fire Safety requirements (CfI-S1) and has a wear classification of Class 32 (BS EN 1307) Coir is a natural material which looks great, offers excellent durability and also absorbs a great deal of dirt and moisture, which means you will save on cleaning costs.

The yarn is mechanically spun to ensure a uniform and regular pattern with minimal fibre loss.

This product can absorb up to eight litres of water per square metre, producing unrivalled performance in this product sector.

This product is constructed using an unique glass scrim which means that this product is hardly affected at all by stretching and is extremely stable. That means it is also ideal for wheelchair users and presents no problems at all for people on crutches or wearing high heeled shoes.

Unique glass scrim layer means DDA Coir is more stable, more densely packed than other products - making it ideal to handle wheeled traffic, crutches and high heels.

# **EXT MAT**

# **Description:**

EXT MAT is a special outdoor mat that pairs scraping qualities with moisture absorption. The outdoor mat is available in three colours and suits every entrance.

EXT MAT is a robust mat that is ideal for heavy commercial use. It works best in entrance areas, stairwells, hospitality areas & lifts, for example, in commercial buildings and

Consequently, the mat is optimised for scraping. Small areas of dirt in the mat are not visible. This product can be used inside or outside and provides a durable solution in high traffic areas thanks to its Bouclé construction. The slightly blended design features coarse yarns only.

EXT MAT is a versatile outdoor mat fitting many different situations. This is down to its practical and versatile appeal. Even if the mat is used indoors it continues to perform to the highest standards by preventing dirt and moisture ingress reaching internal floors within a building.

Daily - Vacuum clean

**Weekly -** Removal of grit, etc. vacuum clean. Removal of chewing gum\*

Monthly - Remove large grit from the mat well by vacuum cleaning. Thoroughly clean mat well: - Take modules up and extract dirt / grit from under the mat. Replace modules in exact order they came out.

**Periodically -** Removal of large grit, etc. + vacuum clean.

Cleaning of matwell: - Take up modules extract dirt / grit from under the mat. Check sub floor is sound and replace modules in exact place where they were found. We also recommend that a periodic deep clean using hot water extraction is used to remove deep set dirt within the mat. (Specialist cleaning firms can be recommended).

Cleaning frequency is subject to amount of traffic, surroundings and weather conditions.

\*NB:- removal of chewing gum is best using a proprietory gum

Maintenance Specification for Mat.Works Entrance Carpets and Carpet Tiles - To maximise the entrance carpet's aesthetic appeal, performance and life expectancy, it is imperative to ensure at the specification stage that:

- Carpets will be protected from other site activities during installation and thereafter.
- Clients understand the enclosed information and that they
  accept responsibility for correct carpet care. (Mat.Works will
  provide a copy of the Cleaning and Maintenance guide to the
  end-users address when requested.)

**General Cleaning -** Daily vacuuming with a rotary brush vacuum cleaner, preferably with an adjustable head, is recommended. It is essential to remove all loose soil daily because if left to build up, the particles of dirt are much harder to remove and are more damaging to the yarn structure, thereby decreasing the life of the carpet.

Entrance Areas are prone to higher traffic levels and higher levels of dirt and moisture. This means that the maintenance program for entrance matting should be more frequent than for general carpeting areas, a ratio of 2 entrance cleans to 1 carpet clean is a general good quide for preventative periodical maintenance.

Depending on the level of trafficking, the carpet should be periodically deep cleaned using high performance hot water extraction equipment. In certain circumstances, for instance excessively stained carpet the cleaning professional may consider a combination between rotary brush and extraction equipment to give improved results. Rotary brush cleaning by itself is not recommended.

A reputable contract cleaner should be used, preferably NCCA registered (for NCCA details telephone 0116 271 9550). It is important that the carpet is deep cleaned at least once a year.

**Stain Removal -** It is essential to deal with spillages immediately and any subsequent stains as appropriate. In the event of a spillage, immediately blot with a clean absorbent cloth until there is no further transfer from the carpet to the cloth. If any further stain remains or has otherwise been allowed to dry, the method will vary accordingly.

It is recognised that particularly for contract situations, if stains are not dealt with immediately, cleaning staff may not be in a position to identify the type of stain. A good quality, multi-purpose stain remover is therefore very useful, although it must be understood that this will not successfully tackle all types of stains, and wherever possible the chart recommendations should be strictly adhered to (see right). Also any stains left over a period of time become increasingly more difficult to remove and may require several treatments.

In all cases after stain removal the carpet should be allowed to dry completely and then cleaned with a rotary brush vacuum cleaner.

Solvent cleaning of bitumen backed tiles should preferably be avoided. Where this is not possible, extra caution should be taken and only very light surface cleaning should take place.

### **Special Cases**

Cigarette burns – it is recommended that these are punched out and replaced by a professional carnet fitter

Major spillages – seek professional advice from a member of the NCCA.

If any of the treatment lists are not successful, seek professional help. The methods are based upon experience and are recommended in good faith. However, we cannot accept responsibility for their use in any specific case.

# cleaning & maintenance cleaning solutions & methods

Cleaning method A	Type of stain
A liquid detergent such as Granwax spot/stain remover, in accordance with manufacturers instructions. Finally, cover the damp area with a thick wad of dry cloths, cover with something heavy and leave for several hours.  Cleaning method D  A paste made with biological washing powder and mixed to use as little water as possible. Method: Moisten stain with warm water and cover with the paste. Keep moist for approximately 2 hours. Sponge with clean warm water and	

# National Floorcoverings

# Our Heritage - Our Future

Producing a wide variety of products from entrance matting, fibre bonded carpets for the education market, tufted carpet and tiles for the commercial sector to specialised indoor and outdoor sports surfaces, the group has expertise in all flooring fields.

The family is dedicated to maintaining and developing its UK manufacturing base with customer support. It takes a colossal supply network to ensure a combined 500,000 sq.ft. of facilities run efficiently. In support of the local community, suppliers are often used in the surrounding vicinity of the factories.

By striving to be No.1 in sustainable design for flooring solutions the family of companies has established strong international export presence in more than 50 countries.

Where tested, the group has BRE 'A+' Ratings for its products, being the highest environmental standard currently available.

Across the UK, the group employs **over 350** people, most of which are local to the five manufacturing facilities in Yorkshire and Derbyshire.

With clients such as Google, Apple, Local Authorities the Health Service, the Ministry of Defence, there is always a requirement to provide the highest quality products using the most technologically advanced production processes and therefore commanding a route to the future.

National Floorcoverings UK have a strong international export presence in more than **50 countries.** 

National Floorcoverings is a **UK** family owned business which, along with associated family businesses, has a turnover exceeding £60m.
